**Department/College/Org:** Department of Biology, College of Science

---

**ABSTRACT (250 words or less):**

The Department of Biology has approximately 900 students as majors. We also provide service classes that effect many other departments including, but not limited to Nursing and Kinesiology. Thousands of students pass through the department's classrooms each semester. STEP grants and funds from Distance Learning have allowed us to up-grade the audio-visual (AV) equipment in all three of our large lecture halls. We have also been able to upgrade the seating, paint and lights in room 222 Wharton, our largest lecture hall. However, the rest of our classrooms and laboratories need attention desperately. While some rooms have some AV equipment, just as many do not! All of our non-lecture classrooms have analog equipment rather than digital. The lack of appropriate equipment is limiting those people who are trying to teach, and more importantly it is limiting thousands of students who are trying to learn. This grant proposes to bring all of these classrooms up to date with modern AV equipment.

**Project Description:**

**a. Purpose of grant and impact on student body as a whole:**

This grant proposes to up-grade the AV capabilities of eleven classrooms, six in Billeaud and five in Wharton. Each room has different needs, therefore, the equipment we have requested for each room varies slightly (see table). Two of the rooms, 106 in Billeaud and 401 in Wharton, are conference rooms. These rooms are used for senior and graduate level classes as well as student and faculty presentations and meetings of all types, academic and professional. We have requested video conferencing capabilities for these two rooms. We have requested "idea-boards" (touch-screen boards) for three classrooms, 113 and 122 in BLD and 416 in VLW. These boards will allow for interactive learning to take place. New digital projectors are requested for all rooms. In some cases the digital projectors are replacing analog projectors, in other cases there are currently no functioning projectors present. Computers are requested for all but two of the rooms. We are requesting white boards for several rooms. This better addresses the needs of the modern classroom, while simultaneously eliminating chalk dust that is very damaging to electronic equipment. New podiums will house the computers and associated wiring. These are necessary in several of the rooms. Currently only four of the eleven classrooms have podiums that house the AV equipment.

The minimum number of students this grant will affect is 900. However, that number only accounts for students who are biology majors and it only accounts for one year. If measured over the lifetime of the equipment use this grant will affect thousands of students with a variety of majors represented. A clearer indication of the number of students affected will be discussed in the justification section.

**Table displays the equipment requested for each room**

Room number & Building	Proj. Digital	PC video conf. capable	Physical mounts wiring	Screen	Idea Board	White Board	Comp.	Podium Tall	Podium small cabinet	Notes: \$1000.00 required for new electrical wiring in all rooms
Billeaud Hall (BLD)										
106 BLD	X	X	X	X			X	X		This room is a conference room, used as classroom frequently
115 BLD	X		X			X				Leave one chalk board
113 BLD	X		X		X	x3	X		X	two small white board on each side of idea board, one 16' w-board replace chalk
122 BLD	X		X		X	X	X		X	Eliminate one chalk board, replace the other
239 BLD	X		X	X small						
245 BLD	X		X	X		X	X	X		Replace chalk board
Wharton Hall (VLW)										
401 VLW	X	X	X	X		x2	X	X		Replace old white boards, Only one table will be Skype ready
406 VLW	X		X	X		x2	X	X		
409 VLW	X		X	X			X	X		This is a long room, add TV on ceiling in middle of room so the back can see the projection
411 VLW	X		X	X			X			This is a long room, add TV on ceiling in middle of room so the back can see the projection
416 VLW	X		X		X		X		X	Podium must be very small

**b. Projected life time of enhancement:**

AV equipment and its supporting technology improve and advance quickly. The estimates we propose here are conservative. The Department of Biology takes care of the equipment it has and we intend to continue to do so. Furthermore, we will be requiring all users of the AV equipment to document their training. This includes new faculty and graduate students. Based on our best practices we estimate that the computers will last 3 to 5 years before they need replacing. The

projectors should last longer, 5 to 7 years. We estimate the lifetime of the idea-boards and video conferencing equipment to vary greatly, dependent on its use 3 to 10 years. The electrical wiring and screens may last the lifetime of the building.

**c. Person responsible for, implementation, installation, maintenance, operation and training:**

Dr. Sherry Krayesky-Self has obtained a quote from GoMedia. This company will install the AV equipment. Dr. Sherry will prioritize the rooms for AV insulation and she will implement and oversee the project. She will design and help implement a plan for training all users of the AV equipment after it is installed. Training all users is meant to enhance the lifetime of the equipment by eliminating user error. Dr. William Schmidt is the online teaching expert in the Department of Biology. He will be beta testing each system after it is installed making sure it meets the Departments needs. He will also help design and help lead the training required for each user so the system can be fully utilized. Dr. Sophie Plouviez currently oversees inventory in the Department of Biology. She will work with GoMedia to make sure all equipment is recorded to inventory and that any problems are reported to GoMedia and corrected. She will also coordinate and communicate with the Heather Birdsong who is the Department's AV maintenance person. Heather Birdsong will communicate with the STEP office about all maintenance issues involving this AV equipment. Drs. Beth Stauffer and Erin Sigel are invested users of room 122 BLD. This room will be one of the first equipped. These two will assist with beta testing the design we have requested. We will update and improve our precise plans for other rooms based on their findings. Collectively, we will quickly and efficiently finish all of the AV up-upgrades, without disturbing classes in session, within one year.

**d. Justification:**

The classes taught in the laboratories and classrooms we plan to equip with new AV equipment include, but are not limited to: Freshman Lab for majors' semester 1 and 2, Non-majors lab, Marine Botany, Plant physiology, Plant anatomy, Oceanography, Invertebrate biology, Microbiology, and Herpetology. Each of these classes / labs holds 10 to 30 students. These courses are taught every semester or every academic year. Most of these rooms house multiple courses, making them busy, high impact areas. The student's ability to see and interact with information is mandatory when learning biology. Currently the ability to see and interact with the information is very limited hindering student advancement. Effective equipment that includes digital projectors and associated podiums that will allow the use of visiting laptops and other digital equipment will improve the success of the thousands of students who use these rooms. The AV equipment in the smaller classrooms of our department has not been updated in years. In some cases the classrooms lack any AV equipment. The University plans to increase interactive, research-based experiences in all courses. We simply cannot do this without improved AV equipment in each and every classroom.

Rooms 106 Billeaud and 401 Wharton are conference rooms that are frequently used as classrooms. These rooms are used for senior and graduate level classes as well as student and faculty presentations and meetings of all types, academic and professional. The classes that meet in these rooms hold 10 to 20 students each and cover advanced topics. The ability to include live video visits from guest lecturers

working at other universities would enhance the experience of our most advanced students. We can also use this capability during thesis and dissertation defenses. Currently, outside committee members are forced to Skype in on a laptop. Using a laptop limits the capability and possibilities of the event; furthermore, it does not represent the Department of Biology well in the global community. Video conferencing is an important tool that is mandatory for effective exchange of ideas in 2019.

The requested Idea Boards and digital projectors requested for rooms 113 and 122 BLD and 416 VLW will greatly enhance the curricula for a multitude of classes, 5-8 sections of second semester freshman biology lab, 3-6 section of non-majors biology lab, 6 ecology and systematic courses, molecular engineering laboratory, and laboratory for immunology, cancer biology, and advanced cell biology. The AV equipment requested for these rooms will directly benefit 400 biology majors and 75 non-biology majors annually (BIOL 113, 2<sup>nd</sup> semester lab for biology majors, multiple sections, BIOL 123 non-majors biology lab, multiple sections, BIOL437G Experimental Design & Data Analysis, 15 students; BIOL 321 Entomology, 15 students; BIOL 360 Principles of Ecology, 15 students; BIOL 433G Plant Systematics, 16 students; BIOL 440 Estuarine Ecology and Marine Biology, 15 students; BIOL 461G Aquatic and Wetland Vascular Plants, 16 students). These technologies will allow for direct projection of live images of organismal details and dissections as well as the ability to annotate directly on the images. The Department has already acquired equipment that will capture the images, like an HD video camera-enable stereomicroscope (purchased in 2017 with STEP funds to Dr. Beth Stauffer) or new compound microscopes (purchased in 2018 with STEP funds to Dr. Sherry Kravesky). At present 113 BLD has a computer that sits on a cart with a projector next to it and a microscope on the other side. Images are projected on to a small, old screen that is positioned next to a chalk board. The cart takes up a lot of space in an already small room. 122 BLD has a traditional blackboard, a small screen and a projector that is sitting on a stack of plant presses. The system will project, but lacks the capability for the projection of microscope images at a large enough size and resolution for students at the back of the classroom. Room 416 in VLW does not have a projector or a computer. It has one small chalkboard. The Idea boards, white boards and digital projectors will be invaluable for laboratory and lectures, allowing for the flexibility to have side-by-side display of power point slides and video, and for annotating lecture slides that can be uploaded to Moodle for students to study from.

Like room 122 in Billeaud hall, rooms 245 BLD and 406 VLW have old analog projectors sitting on lab benches with stacks of books holding them up high enough to project onto a small, decrepit screen. The image that is produced is small, blurry, and difficult to see from the back of the rooms. Both 245 BLD and 406 VLW are on the list of rooms needing major renovations. Therefore, we have requested a simple set up in both cases. The podiums will not be attached to the floors allowing them to be moved or stored during the renovations. A white board will replace the chalkboard in room 245 BLD. This will limit chalk dust that can be damaging to the AV equipment. Room 245 BLD houses BIOL 325. General physiology is a graduation requirement of all biology students. This classroom services approximately 175 students annually. 406 VLW is the microbiology lab. All biology majors with a concentration must take this microbiology

to graduate. Nursing majors are also required to take microbiology. This specialized classroom services approximately 250 students annually.

Rooms 115 BLD and 239 BLD have both been updated in the last 15 years. These rooms need new digital projectors. Room 239 BLD houses several laboratories for 300 and 400 level courses. The room needs a small screen placed beside the “idea board” already present. Room 115 BLD is the freshman biology majors’ laboratory, 13 – 19 sections with 25 students each. This is a total of 475 students a semester and 950 students annually. This room is also used during preview day and is often opened public events. Along with the digital projector this room needs a white board to replace the front chalkboard, in an effort to limit chalk dust and extend the life of the equipment.

Rooms 409 and 411 VLW currently have analog projection systems that are better than some of our rooms, but still lacking a great deal. The projectors need to be replaced with digital systems. These rooms house larger classes holding 30 to 35 students in some cases. The rooms are long making it hard to see a single screen in the back of the room. Therefore in both cases we have asked to hang a large monitor from the ceiling ½ through the length of the room. The computers and screens are old in these rooms and need to be replaced. In room 409 a cart is being used to house the computer. This should be replaced with a podium that will allow visiting laptops to be used.

**Previously funded STEP grant are:**

- 2018: STEP Grant: *Upgrading an Autoclave for Student Research in Biology*: \$19,270.00 – Yi-Hong Wang & Sherry Kraysky-Self.
- 2017: STEP Grant: *Compound Microscopes for Teaching Laboratories in the Department of Biology*: \$126,973.27 – Sherry Kraysky-Self, William Schmidt & Paul Leberg
- 2017: STEP Grant: *Upgrading a Molecular Biology Teaching Lab*. (replacing old molecular equipment in Wharton 416): \$29,392.20 – Sophie Plouviez & Yi-Hong Wang.
- 2017: STEP Grant: *Building Modern Technology Lab for Aquatic Ecology Courses*. \$20,122.71 - Beth Stauffer.
- 2016: STEP Grant: *Specialized research equipment is required for undergraduate research activity in marine biology (phycology/marine botany)*: \$34,675.00 - Sherry Kraysky-Self & William Schmidt
- 2006: STEP Grant: *Stereomicroscopes (Dissecting microscopes) for upper and lower division student laboratories in the Biology Department*: \$181,253.40 – Sherry Kraysky-Self & Ray Bauer.
- 2006: STEP Grant: *Computers required for Biology Study Room-Computer Lab*: \$8,744.00 – Sherry Kraysky Self
- 2005: STEP Grant: *Technological Enhancement of the Biology Freshman/Sophomore Laboratories* (complete remodeling of laboratory room 115 in Billeaud hall): \$80,899.00 – Sherry Kraysky-Self
